

Transforming Food Waste into a Resource

By Andrea Segrè

Royal Society of Chemistry. Paperback. Book Condition: New. Paperback. 279 pages. Dimensions: 8.9in. x 6.0in. x 0.8in. An estimated 50% of the food produced worldwide is wasted. If the entire world had the same voracious appetite as Europeans, it would take three planets to produce the amount demanded. In Britain, 18 million tonnes (14 billion pounds worth) of perfectly edible household food is thrown away every year. Apart from the waste, overeating is becoming a serious public health issue in many countries. According to a U. S. study, Western countries are consuming an average daily surplus of 1400 calories per person. This easy to read manual on overproduction and overconsumption in contemporary society highlights some alarming global data. It discusses the origins and causes of food waste and its correlation with climate change, agriculture, population growth, and the need for a more ethical, ecological society. The complexity of the waste dynamic processes imposes a dire need to reconsider economic relationships and social values in the light of sustainability and eco-efficiency. After a foreword by Vandana Shiva, the first two chapters describe the current imbalanced global food market. The book then goes on to present projects from around the world that...

Reviews

It is an awesome publication which I actually have ever read through. It had been written really properly and valuable. I found out this book from my mom and dad recommended this pdf to discover.

-- **Doyle Schmeler**

This book is definitely not simple to begin on studying but quite fun to see. I actually have read and that I am sure that I will go back to read it again in the foreseeable future. It is extremely difficult to leave it before concluding, once you begin to read the book.
